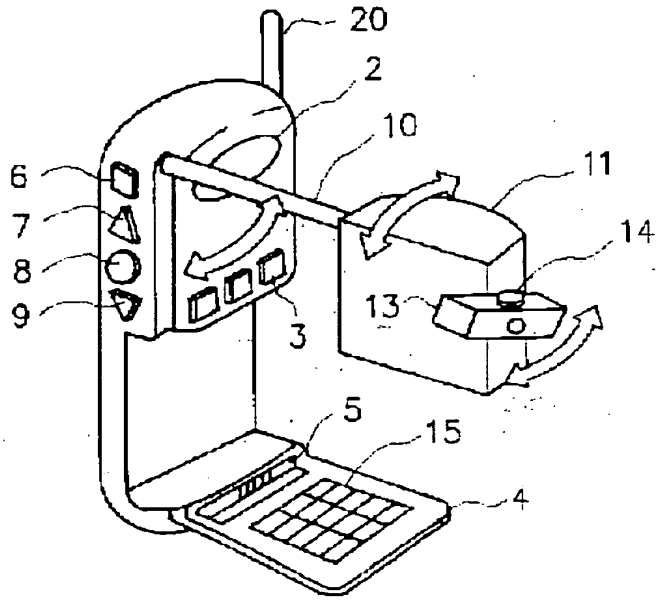
TITLE : MOBILE COMMUNICATION TERMINAL WITH VIDEO TELEPHONE FUNCTION



ABSTRACT : PROBLEM TO BE SOLVED: To attain video telephone communication with miniaturization, convenience, portability and security while keeping a similar speech position to that of voice speech.

SOLUTION: The mobile communication terminal 1 consists of a speaker 2 and a microphone 5 that are contained in a main body of the mobile communication terminal 1, a movable rod 10 whose one end connects with the main body in a movable state, an image display section 11 where the speaker 2 is placed close to an ear of the user, the microphone 5 is placed close to the mouth of the user and which is connected to the other end of the movable rod 10 and may be placed in front of the face of the user and having a parallax image display circuit, and a video camera section 13 that has a distortion aberration correction circuit. Then the position of the image display section 11 and a video camera section 13 is moved to a position based on the human engineering and then reduction in the speaker sound volume and improvement of microphone sound pickup are realized. Thus, the confidentiality similar to a voice speech is provided also to a displayed picture and the need for a transmission/ reception headset is eliminated.
